

BAGAYODA SYSTEM v1.0

USER GUIDE

1 INTRODUCTION

BAGAYODA SYSTEM is designed to identify trading opportunities across Synthetic Indices, Forex pairs, and Metals. The system uses proprietary market analysis techniques focused on volatility behavior, ATR inefficiencies, and market manipulation limitations. Its objective is to exploit recurring market weaknesses while maintaining disciplined execution and risk management.

2 INSTALLATION

- 1 Copy the EA into the MT5 Experts folder.
- 2 Restart MetaTrader 5.
- 3 Attach BAGAYODA SYSTEM to a chart.
- 4 Enable Algo Trading.
- 5 Open MT5 Options > Expert Advisors.
- 6 Enable WebRequest and add: <https://api.fxfirebird.com>
- 7 Enter your license token if required.

3 LICENSE & ACTIVATION

Each account must be activated before trading begins. The platform validates licenses through secure server-side infrastructure. No DLL imports are required. BAGAYODA SYSTEM uses native MT5 technology and WebRequest authorization only.

4 HOW IT WORKS

The system continuously evaluates market conditions and synchronizes its execution logic through live connectivity. Because live authorization and strategy synchronization are required, Strategy Tester results may not reflect live operational behavior.

5 SUPPORTED MARKETS

- Synthetic Indices
- Forex Pairs
- Precious Metals
- Additional supported instruments depending on broker availability

6 BEST PRACTICES

- ✓ Use a VPS for uninterrupted operation.
- ✓ Maintain a stable internet connection.
- ✓ Keep WebRequest enabled.
- ✓ Avoid modifying settings without understanding their impact.
- ✓ Monitor account risk responsibly.

BAGAYODA FAQ

FREQUENTLY ASKED QUESTIONS

Clear answers to the most common questions about the Bagayoda System, our technology, performance, risk management, and more.

1. GENERAL QUESTIONS

Q: What is Bagayoda?

A: Bagayoda is a professional automated trading ecosystem designed to deliver consistent and transparent trading solutions.

Q: Is it just an MT5 robot?

A: No. The Expert Advisor (EA) is only one component of a larger infrastructure that includes cloud systems, risk management, licensing, and ongoing development.

Q: Why use a cloud model?

A: The cloud model improves security, ensures fast updates, simplifies license management, and enables centralized risk control for better performance and stability.

2. PERFORMANCE QUESTIONS

Q: Are profits guaranteed?

A: No. Trading always involves risk, and results are never guaranteed.

Q: Why do results vary between clients?

A: Results can vary based on account size, broker conditions, execution quality, spreads, market conditions, and the start date.

Q: Why are there drawdowns?

A: Drawdowns are a normal part of real trading. The system is designed to manage risk and recover over time.

3. RISK MANAGEMENT

The Bagayoda System automatically validates account conditions in real time. If risk parameters are outside the recommended range, the system may restrict certain operations to protect your account.

4. LICENSING & SECURITY

Q: Why is a license required?

A: A license is required to protect our intellectual property and to ensure secure and authorized access to the system.

Q: Why is the strategy not disclosed?

A: The strategy is the result of years of research, testing, and development. It is our intellectual property and a key reason behind the system's performance.

5. COMMON OBJECTIONS

Q: If it works, why sell it?

A: Subscription revenue supports continuous development, infrastructure, risk management, and long-term growth.

Q: Why not release the source code?

A: Our source code is proprietary technology. Protecting it ensures the system cannot be copied or misused.

6. LIVE CLOUD UPDATE & MULTI-ASSET SELECTION

The system benefits from live cloud updates that enhance performance, security, and risk management. Bagayoda is designed to operate across multiple asset classes, allowing the system to adapt to market conditions and select the best opportunities automatically.

7. FUTURE DEVELOPMENT

We are committed to continuous improvement. Future updates may include new strategies, stronger risk controls, enhanced cloud infrastructure, and broader asset coverage to provide more opportunities for our clients.

RISK GUIDE

Everything you need to know for a safe and optimized trading experience with Bagayoda System.

IMPORTANT

Trading involves risk. Use proper risk management and never invest more than you can afford to lose.

EA SETUP GUIDE

INSTALLATION

Attach the EA to one chart only.

- ✓ For Deriv users: Step Index (M1 recommended).
- ✓ For other brokers: XAUUSD (M1 recommended).

The EA automatically analyzes all supported markets internally, therefore a single chart is sufficient.

HOW THE EA SELECTS MARKETS

The EA automatically adapts its activity according to account size. Small accounts are protected from excessive exposure, while larger accounts allow the EA to analyze and trade a wider range of instruments. As account capital increases, the EA can safely monitor additional assets and opportunities.

LOT SIZE MULTIPLIER

The Lot Size Multiplier allows you to increase or decrease the volume traded by the EA relative to its default risk model. Higher values can generate higher profits but also increase drawdown and risk.

THE INPUT ANTI-MANUAL

Prevents unwanted manual trades from interfering with the Bagayoda System. If enabled, any manually opened position on the account may be automatically closed. If you use other EAs or trade manually, simply disable this feature. Enable it only when you want Bagayoda to have full control over trading activity on the account.

RECOMMENDED SETUP

RECOMMENDED BROKER FOR SYNTHETIC INDICES

deriv.com

RECOMMENDED BROKER FOR FOREX & GOLD

STARTRADER.com

RECOMMENDED VPS PROVIDER

GOVPSFX
VPS SERVERS FOR TRADING

Keep your trading running 24/7 with a reliable VPS. Recommended for uninterrupted operation and lower latency.

RECOMMENDED MULTIPLIERS

FOR DERIV

ACCOUNT BALANCE (USD)	RECOMMENDED MULTIPLIER
\$500 - \$1499	0.1 - 0.3
\$1500 - \$2999	0.3 - 0.8
\$3000 - \$5999	0.8 - 1.5
\$6000 - \$9999	1.5 - 2.5
\$10000 - \$14999	2.5 - 5.0
\$15000 - \$24999	5.0 - 10.0

Above \$25000, add 0.5 for every additional \$2000.

Examples:

- \$30000 = 12.5
- \$50000 = 17.0
- \$100000 = 32.5

FOR OTHER BROKERS

ACCOUNT BALANCE (USD)	RECOMMENDED MULTIPLIER
\$500 - \$1999	1.0 - 1.2
\$2000 - \$3999	1.2 - 1.5
\$4000 - \$7999	1.5 - 2.2
\$8000 - \$14999	2.2 - 3.0
\$15000 - \$24999	3.0 - 5.0
\$25000 - \$50000	5.0 - 10.0

TIPS

Start with the recommended multiplier for your balance. Adjust gradually based on performance and risk tolerance. Higher multipliers increase both potential profit and risk.

RISK NOTICE

Trading involves risk and no trading system can guarantee profits under all market conditions. BAGAYODA SYSTEM is designed with adaptive risk management principles, but periods of drawdown may occur. Clients remain responsible for selecting multiplier settings that match their personal risk tolerance and financial situation. For long-term stability, it is generally recommended to remain within the multiplier ranges suggested in this guide. Past performance does not guarantee future results.
