

USE GUIDELINE

2025

Prepared by : Anka Oscar

This EA accepts only this broker

deriv.com

1.Introducing EA

Quantum Ultra EA is an Intraday/daytrading Expert Advisor (EA) designed to exploit market trends on MetaTrader 5. Combining multi-indicator analysis (DMA, ATR, CCI and FireBird pro) with advanced risk management mechanisms, it dynamically adapts to market conditions to optimize trading opportunities.

2. Installation

1.Download the .ex5 file (Quantum Ultra EA.ex5).

Ask for the download link at www.fxfirebird.com

2.Copy it to: MetaTrader 5/MQL5/Experts.

*Make sure also have the **FireBird Pro**

in the section: MetaTrader 5/MQL5/Indicators

*Download presets (.set) to an easily accessible file.

3.Restart MetaTrader 5.

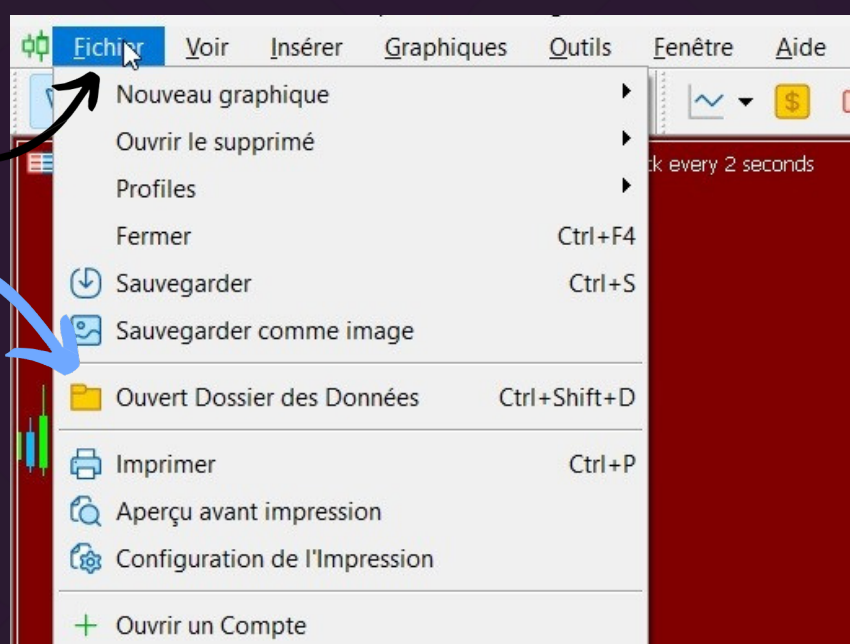

4.Drag and drop the robot onto a chart (BTCUSD, Step Index, Volatility (75, 100, 50...) Index, etc.).

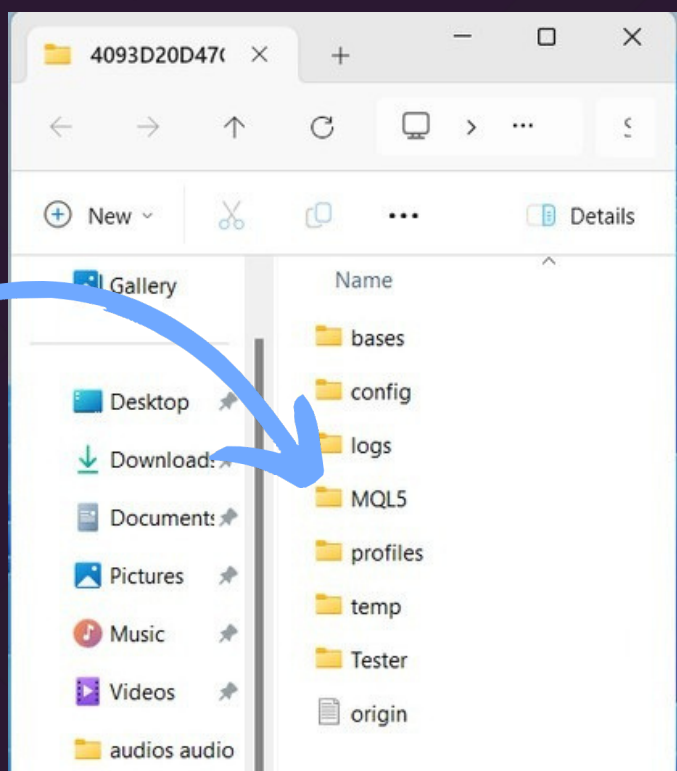

Quantum Ultra EA does Intraday/DayTrading style, so wait for the trade to close on SL/TP for a better return. You also have the choice using Martingale if you want the aggressive mode.

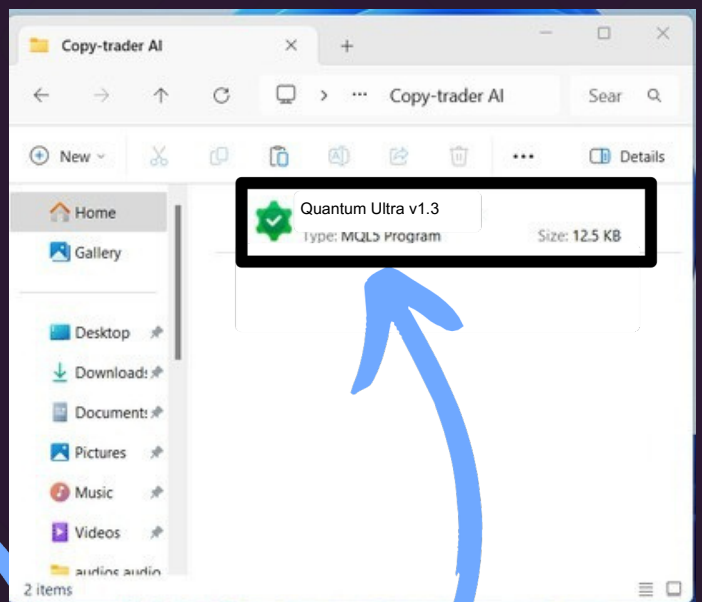

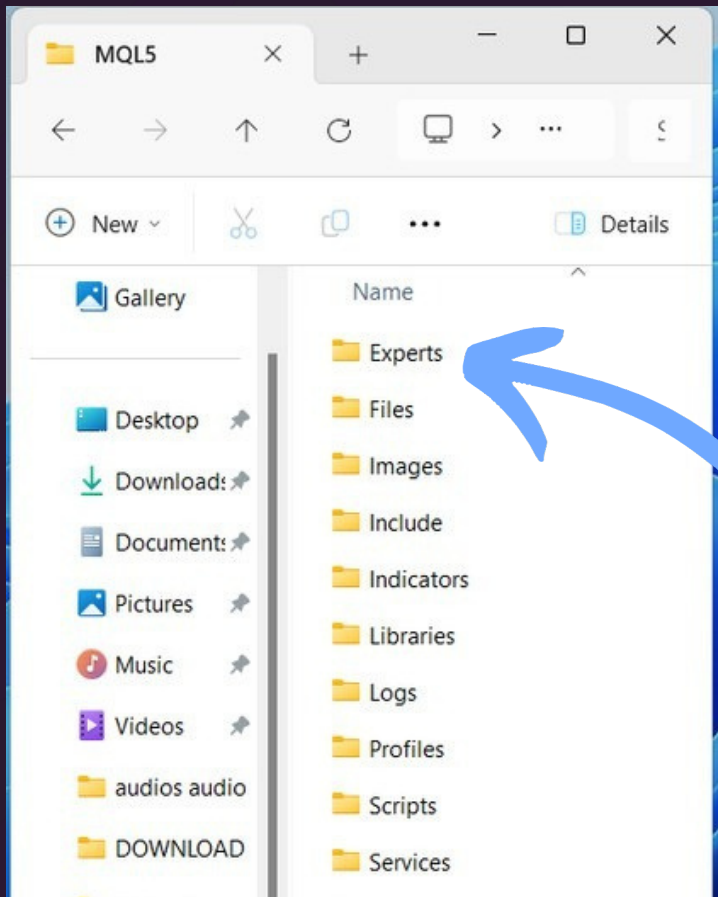

Image illustration :

Go to the "Files" menu, then "Open Data Folder".

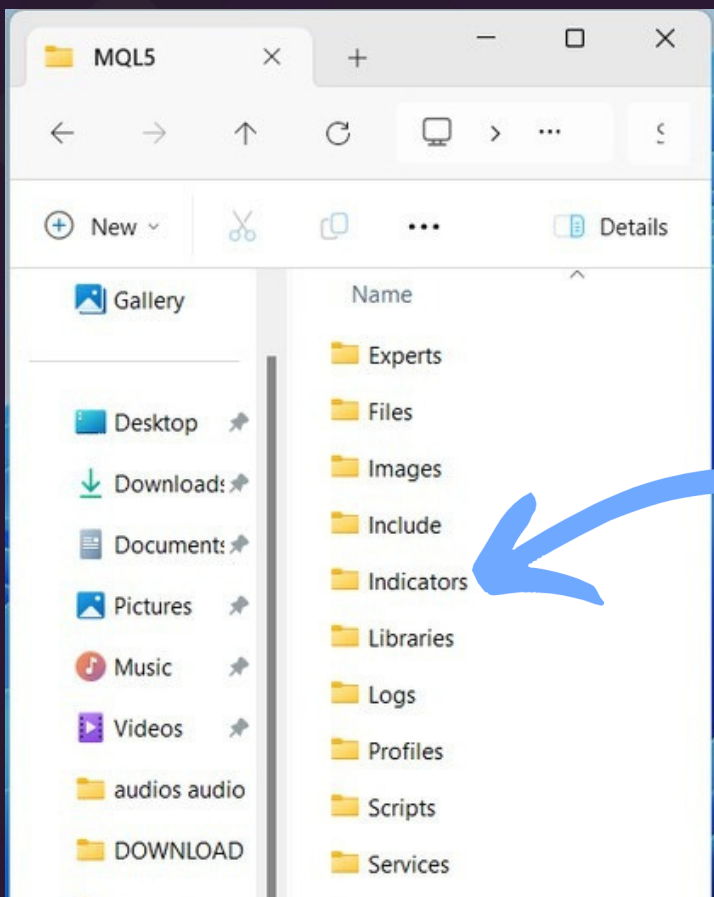

Then in MQL5

Open "Expert", then paste the files you downloaded into your download folder.

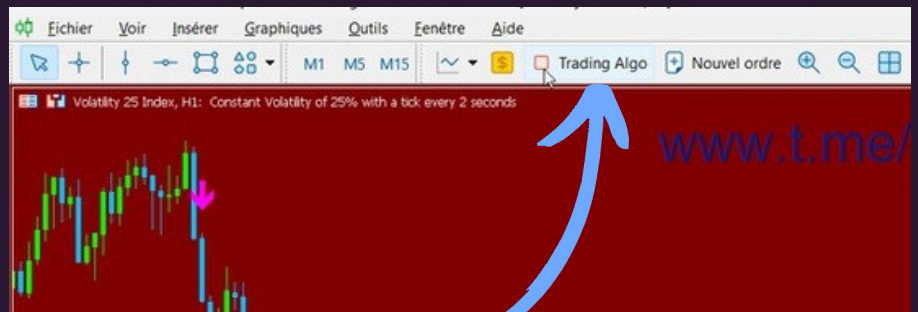

Put the FireBird Pro indicator here

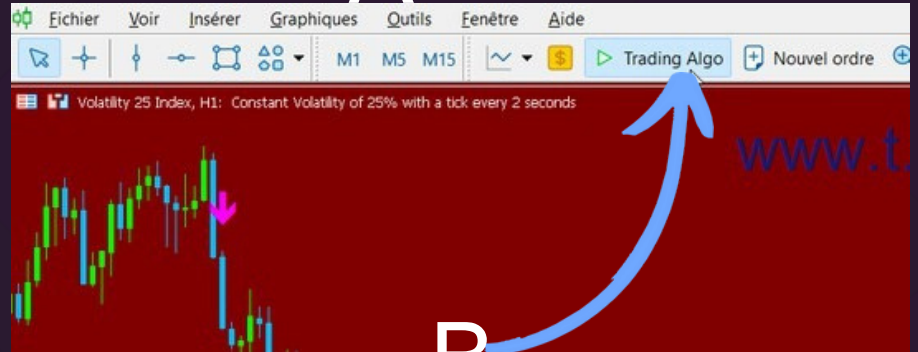

You can now restart your Meta Trader 5.
Once restarted, activate the "Trading Algo" (automatic trading on MT5).

On screenshot A you can see that this is disabled by default, once you click the pass button on

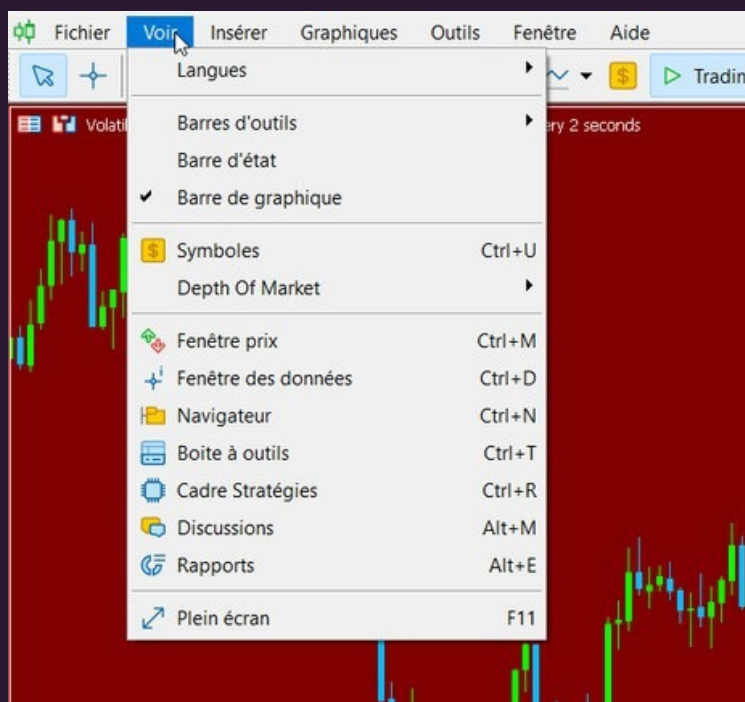

red to GREEN ✓ (capture B)

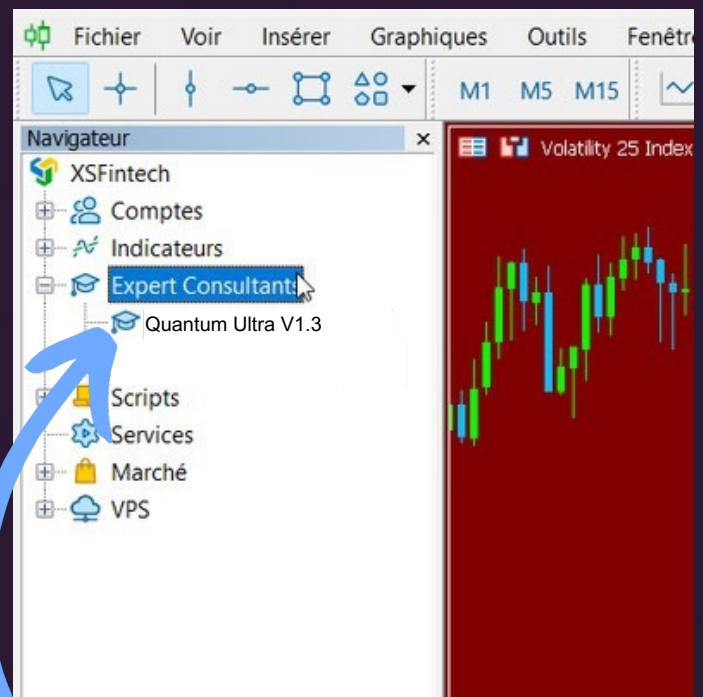

A

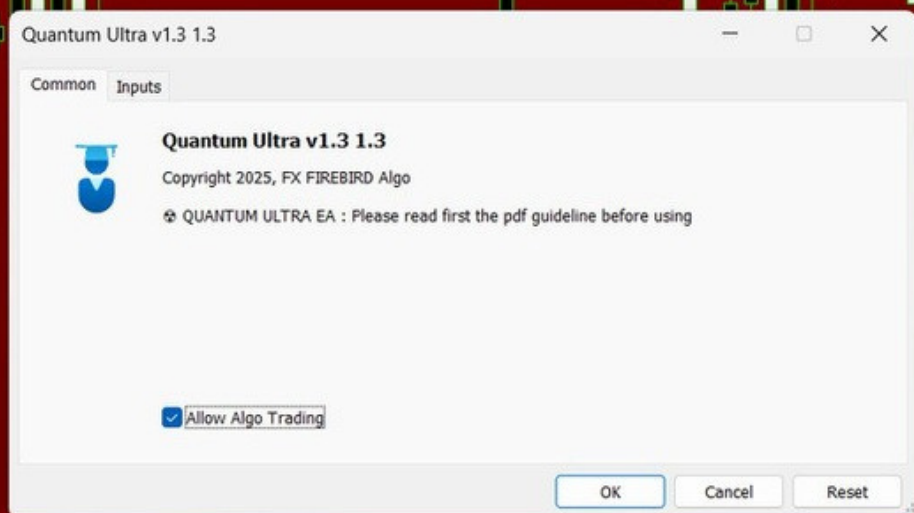

B

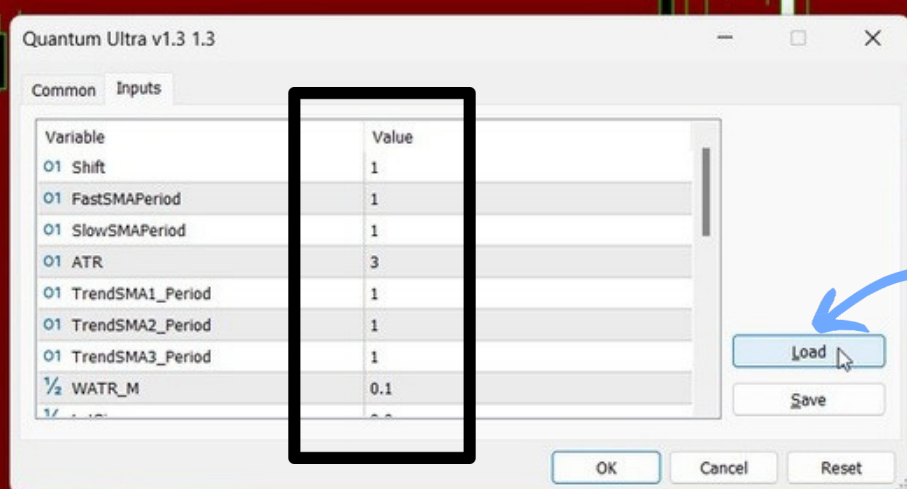

Go to "View", then "Browser".

Double-click on "Expert Consultant" and you'll see othuart two bot are there, you can now put them on the graph just by double-clicking on the file.

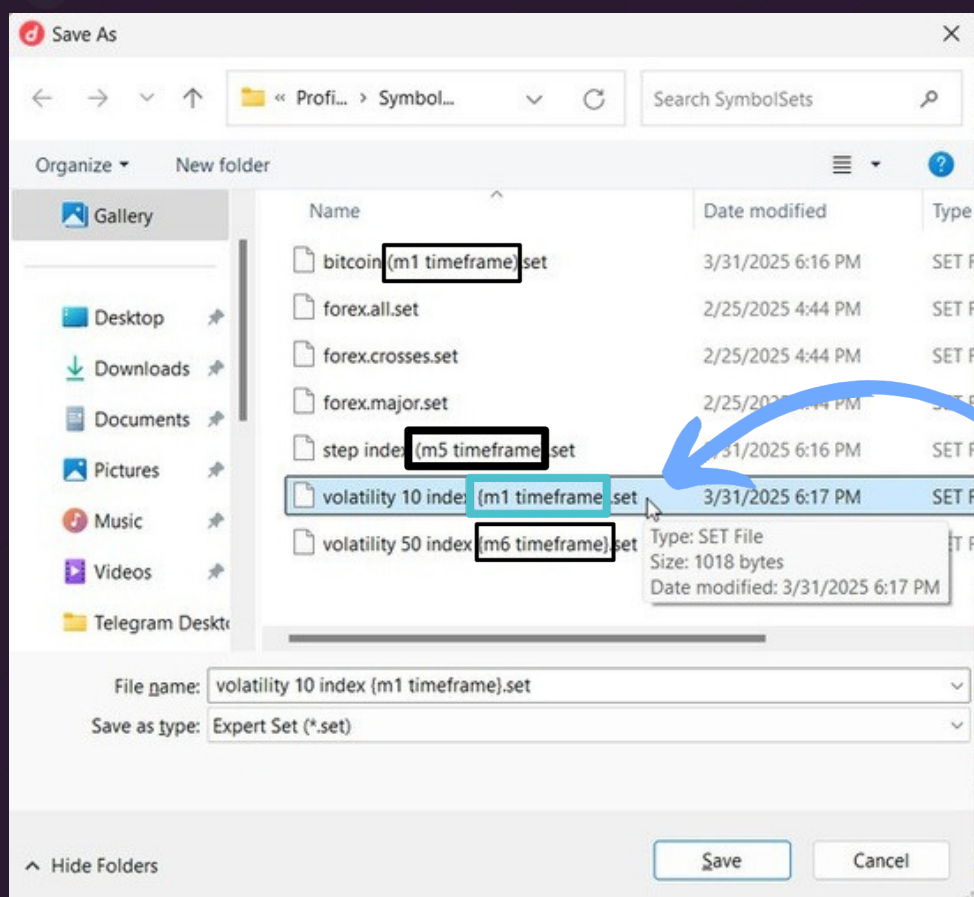

Authorize the bot for the trading algo, then go to 'Inputs'.

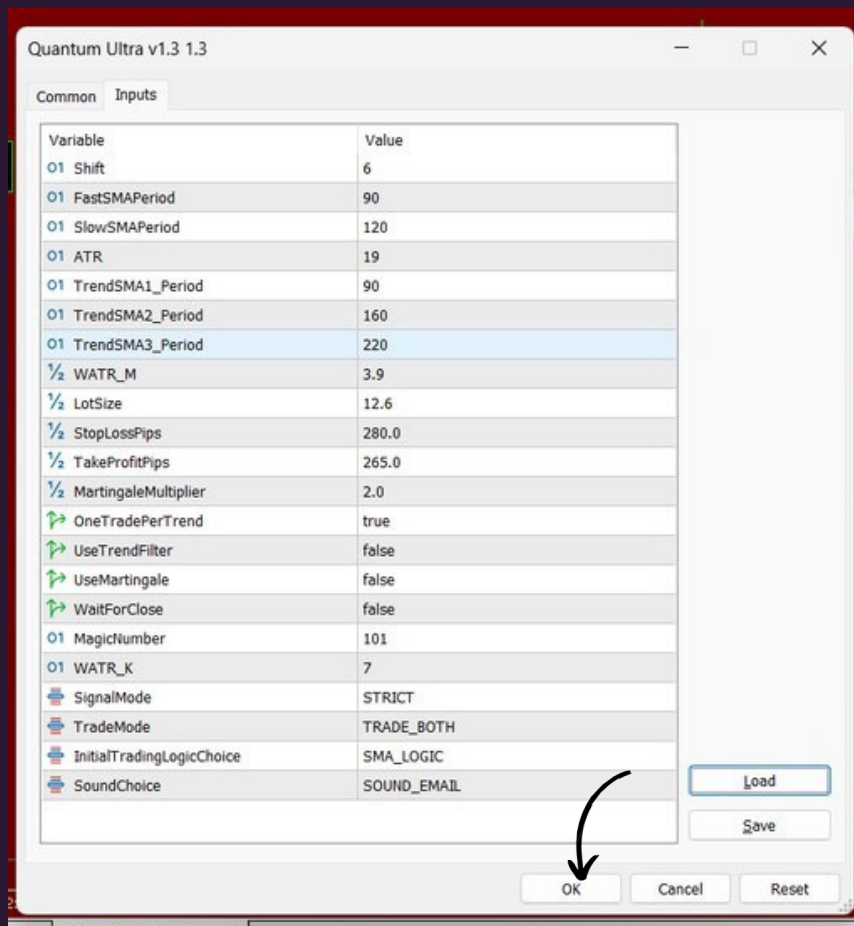

As you can see, these are the default settings.

Click on Load to insert the correct configurations

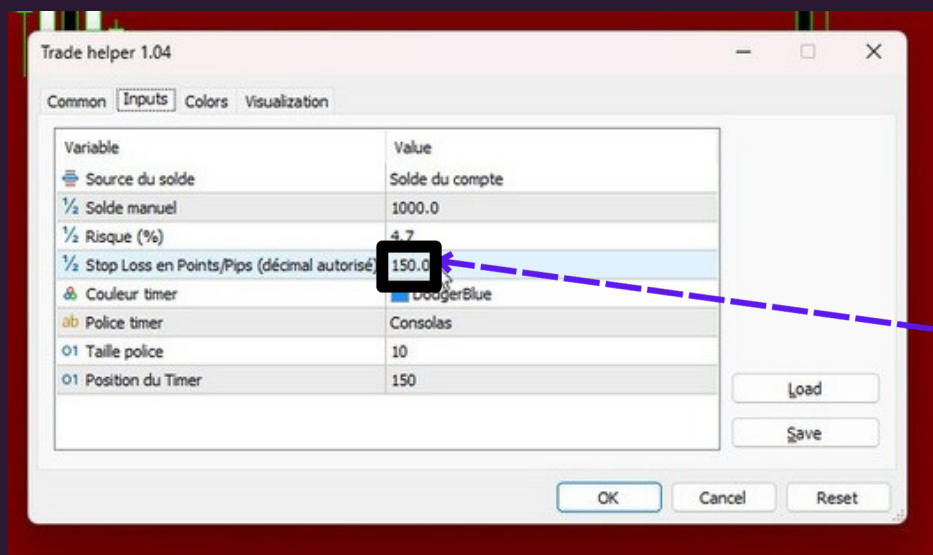

Double-click on the one that corresponds to your active present on the graph. Be sure to respect the TimFrame for best performance.

All settings will be applied directly, click OK to finish.

The lot size on each preSet is calculated on the basis of the capital of \$500. I recommend that you choose the lot size that corresponds to your account. To find out easily, use the Trade Helper that I send together with the EA.

This is an indicator, you put the risk you want, then on the SL you put the one found in Quantum Ultra EA, But you add 0.

Example: On Volatility 100 Index we have 470 pips on SL in Quantum Ultra EA, so you write 4700 pips here on Trade Helper Indicator.
